

Ag-Bag

Description:

Ag-Bag's farm and agricultural equipment includes silage baggers and silage inoculants. Our silage bagging system used in the dairy, beef and sheep industry as well as used to store byproducts such as wet beet pulp, brewers grain, etc. Traditional methods of storing feed have included bunkers, pits, and silos, or baling hay. Silage is made using the Ag-Bag system by storing forage crops, such as corn, sorghum, alfalfa or grass under anaerobic (without oxygen) conditions in sealed Ag-Bag storage bags. Ag-Bags method is to store the feed in plastic bags up to 500' in length and up to 14' in diameter. The feed is compacted tightly into the bag by using the machines rotor design and patented braking system.
